

Current Comment

By R. H. K.

The opinions (if any) expressed herein, are not necessarily those of The Campbell Press.

Quite a number of Campbell folks have visited the Golden Gate International exposition on Treasure Island in San Francisco bay, and they are practically unanimous in singing its praise. And to those who have not yet observed the fair at first-hand I would say by all means do so at the earliest opportunity.

Speaking as an experienced fair-goer (one visit, which gives me a feeling of tremendous superiority), it is the best thing that has happened on this coast for many a long year. It may be overwhelmed in sheer bulk by the New York fair, but from the standpoints of planning, horticultural beauty and all around architectural rightness the San Francisco show lacks a peer anywhere on earth today.

Absolutely beautiful in the day time, the buildings and grounds become even more impressive when the lights are turned on at dusk. Beggaring description, the display is well worth waiting around for, even if you plan to leave for home shortly after the illumination is brought into play.

Exhibits, while not as complete as those at the 1915 exposition, are very good; notably those of the University of California, which was as far as I managed to get. (Don't try to see it in a day.)

Some erroneous reports have been circulated as to the price of food on the island. Prices are high if you want to pay high prices, but on the other hand, hot dogs and the like are to be had at standard prices, and there are cafeterias where one can procure an excellent and satisfying meal for 50 cents. One of these, where the food is very good, and the coffee superlative, is located in the north end of the science building.

If you plan a visit in the near future, before the Folies Bergere leaves the exposition auditorium, and if you like good vaudeville and are not too shocked at large expanses of undraped pulchritude, by all means take it in. It's a swell show, the like of which will not be available to Californians for some time to come, I'm thinking.

The Mrs. believes that for those who would like to orientate themselves before striking off afoot, there's nothing like the 35-cent "sight-seeing" jaunt on an "elephant" train. Courteous young men with pleasing voices explain the points of special interest as you circuit the island on a four and one-half mile ride, and divulge bits of information, valuable to the serious visitor, which he might otherwise happen upon only by chance.

Your first purchase at the exposition should be a guide book, for though the whole impressive array of the fair is set out upon a tract only 400 acres in extent, you'll find it a bit confusing to try finding some special place you want to visit without the invaluable booklet. A member of our party had one, but when we separated, as is smart with bigish groups, we without guide books were at a distinct disadvantage.

Along with all of this swell information—which I am giving out absolutely free—I'd like to add a final admonition: If you plan to prolong your visit after darkness falls, take along a warm wrap of some kind. Leave it in your car if you wish, but ankle over and get it about 6:30; you'll enjoy it.

Local Nine Wins Over Los Gatos

Coming back into the title race after two setbacks this season, Campbell high's ball club topped the Los Gatos Wildcats 7-6 in a close contest played on the Gem City diamond Friday.

Shortstop Mitchell Lobrovich hit a home run with Arnold Maggetti on base in the third inning in which Campbell sewed up the contest with five runs.

Los Gatos out-hit the local nine, 9 to 6, but Henry Frank, Campbell's star pitcher, fanned 12 batters.

The local ball club will meet Bellarmine here in a practice game April 18.

Camellia Hobby Becomes Business For Retired Pair

By DON MARTIN

Mr. and Mrs. Ernest S. Burkhard tenderly nursed one sick little camellia in 1930. When the shrub died, the elderly couple studied all the available information on camellia culture and began to raise the delicate rose-like flowers as a hobby. "Our hobby has become a commercial venture, though not a very profitable one," Burkhard explained. "Love of the beautiful camellia blossoms lures us on," Mrs. Burkhard added.

Today Mr. and Mrs. Burkhard have over eighty varieties of camellias, including many very rare species, under cultivation at their greenhouses on the San Jose-Los Gatos road near Apricot avenue.

A double bright rose camellia, the Reticulata, is the rarest of the slow-growing Asiatic shrubs in the Burkhard's gardens. This shrub was imported from England and there are only two other Reticulatae in California, one is at the University of California's experimental station in Marin county. Other rare camellias grown by the retired couple are the Grandi Flora, the Flame, and the Kaiser Wilhelm.

Before retiring in 1929, Burkhard was head of the mechanical drawing department of Cogswell college in San Francisco for twenty-nine years. After a trip to Germany, the Burkhard's built a home in Campbell and soon adopted camellia raising for a leisure time activity.

According to Burkhard, the three necessities for the successful cultivation of camellias are a slightly acid soil of peat moss and sandy loam, a location that receives shade in the afternoon,—and experience.

Advertising Agency Opens In San Jose

Santa Clara county's fourth advertising agency was established this week with the announcement that Frank Henrotte opened offices at 40 West San Antonio street in San Jose. A graduate of the University of California in 1932, Henrotte is also instructor of the San Jose Adult Education advertising course.

Before coming to San Jose in 1937, Henrotte followed the advertising business in both San Francisco and Los Angeles where his work included the preparation of advertising campaigns for advertisers in newspapers, national magazines, outdoor boards, and radio.

Voicing confidence in Santa Clara county packing and manufacturing industries, the ad man states that the sales promotion efforts on behalf of local industries has already won world-wide recognition and will continue to grow and progress. "Santa Clara county does not fully realize the importance of itself in national markets," stated Henrotte, "but the fact remains this county is becoming one of the major national producers and will continue to do so."

Kiwanians Learn About Chain Stores Tuesday

A. S. Sprouse of the Sprouse-Reitz stores discussed the "growth and development of chain stores" for the Campbell Kiwanis club at Tuesday's meeting.

Visiting guests were the managers of the Sprouse-Reitz stores in Los Gatos and Santa Clara, Oscar Stark, northern California manager, and Dale Burford, San Leandro.

Mr. Sprouse was a travelling salesman for 36 years before becoming head of his business and spoke on both sides of the subject.

Axel Granstrom, manager of the local store presented the speaker.

Next week Ray W. McClintic, physical education instructor at Woodrow Wilson Jr. high in San Jose will speak on Red Cross services with H. M. Shadle chairman.

Hawaiian Pavilion At S. F. Fair

This is where Hawaii will display all its tropical charms, and hula hula maidens from Honolulu will dance during the California World's Fair on Treasure Island. The statue is that of King Kamehameha I, exact reproduction of the original statue in the island capital.

Ed Genasci Is Re-elected Chief Of Fire Dept.

Campbell Fire company elected officers Monday night, or rather re-elected, as they served the past year and some for several years. Ed Genasci is again their choice as chief; Jack Scott, assistant chief; Antone Ferro, treasurer, and Quito Scott, secretary.

Chosen to serve on two important committees were Tony Sanfilippo, Ray Dean and Donald Genasci, finance; Melvin Genasci, Walter Dahms and Jack Scott, examination.

A convention of fire chiefs will be held at the Exposition Sept. 18 and 19, at which an attendance of 2000 is expected. At a meeting of the Peninsula fire chiefs it was arranged to entertain the ladies of the coming convention with a trip ending with a barbecue at San Jose. Chief Ed Genasci was appointed to take charge of one group.

The marvellous disaster service unit, presented to the city of Portland by Aaron M. Frank last month, will be on display at the fair during the convention. This machine is described in another article in this issue.

High P.-T.A. to Meet April 12

The Campbell Union High school unit of P.-T. A. will hold its regular meeting in the little theater of the school Wednesday, April 12, at 2:30 p. m.

There will be a report of the nominating committee and election of officers; also a panel discussion under the direction of Principal W. H. Van Dyke. The topic "Home Work and Report Cards" should be of great interest to all parents of high school students.

At 1 p. m. the executive board will meet at the home of the president, Mrs. E. A. Howe. As this is the last board meeting of the current year, all members are urgently requested to be present.

The unit will hold the last evening card party of the year in the school gymnasium on Saturday, April 12, at 8 p. m.

Otis Hyde Shows Art Work Here

A group of paintings which were part of a display at Stanford are now adorning a wall in the Campbell Water company's office. They are the work of Otis Hyde, and cover a variety of places and subjects. A mountain scene near Kernville and the home of Robert Louis Stevenson have met with special commendation.

Visitors are welcome to stop in and see them.

Frank Cutting and Otis Hyde

Pundita Circle Met March 29 At Fig Tree Inn

Pundita Circle held their regular meeting of March 29 at Fig Tree Inn where they had a delicious desert followed by a very interesting talk and demonstration of flower arrangement by Miss Grace Bucknall assisted by her sister Mrs. White.

The hostess of this delightful afternoon was Mrs. W. H. Stray, assisted by Mrs. E. O. Curry and Mrs. E. F. Pope.

The pleasant dining room was decorated with bouquets of spring flowers and made a beautiful setting for the meeting.

The business session followed the program. Notes from the annual meeting of the County Federation were given by Mrs. Rose Hanger and Mrs. L. J. Carboni.

The following nominating committee was elected by the club: Mesdames Carboni, M. E. Purmort and M. E. Mumma.

Before leaving for the afternoon the ladies spent a pleasant hour roaming about the grounds and enjoying the many beautiful flowers.

The next meeting will be held at the home of Mrs. Hanger with the subject of old costumes, customs and antiques, on April 12. This will not be guest day as stated in the program.

Sewer Bonds Get O.K. At Election

The count of votes cast in the sanitary bond election showed a margin of two more than the necessary two-thirds to permit the board to issue and sell bonds to finance the districts share of the expense.

The presidential approval of the WPA allotment of \$235,453 was received Saturday morning. All labor for the project will be provided by the federal funds. The remaining \$105,430 will be contributed by the sanitary district and San Jose.

The sewer outfall will connect with the San Jose system and as it will serve a part of their territory, the city is spending \$15,000 for installation of over-size pipe from Moorpark avenue to entrance of the outfall sewer.

Work is expected to start the latter part of the month and will employ a large crew of men for several months.

J. O. Leverton is enjoying a well earned vacation this week, visiting his sister, Mrs. C. C. Brumbaugh at Oceanside. He was accompanied by his son, Kenneth.

recently had a joint exhibit at Stanford, and since then Hyde has been in O'Connor sanitarium with a case of flu.

Ethan Lanphear Elected to Board Of Fire District

Ethan Lanphear who was unopposed, was elected to serve as a fire commissioner for the Campbell fire district at an election Monday.

We blush to state that but 18 votes were cast. The election coming on Monday, an unusual day of the week for elections, and the fact that it followed so closely the bond election of the preceding Friday, about which interest had centered for several weeks, undoubtedly accounted for the meager vote. However, it showed very clearly that no one was opposed to Lanphear's election, for the opposition always votes if possible.

T.B. Assns. To Hold Dinner Meet April 12

President of state and national tuberculosis associations will be guests of honor and speakers at the annual dinner meeting of the Santa Clara County Tuberculosis association, to be held April 12 at the Santa Clara county hospital, according to an announcement by Dr. C. Kelly Canelo, president of the local association.

Dr. Carl M. Howson of Los Angeles, president of the California Tuberculosis association, will be speaker of the evening and Dr. Chesley Bush, president of the National Tuberculosis association will bring greetings from the national organization. Both men have had wide experience and are connected with tuberculosis institutions. The meeting is open to the public, and interested persons are cordially invited to attend.

The dinner will be held at 6:30 p. m. in the staff dining room at the hospital, and reservations may be made at the association offices, telephone Columbia 650. It will be preceded by a demonstration of the modern treatment of tuberculosis at the sanitarium, arranged by Dr. Charles L. Ianne, medical director.

Community Choir To Sing Sunday

The Community Choir which is directed by C. P. Klassen, in charge of vocal music in the high school, will present a cantata, "Easter Praise," (Adams) at a vesper service Sunday. This year the union service will be in the Congregational church and is a public meeting.

Other selections will include two numbers from Gaul's "Holy City," and the loved Hallelujah Chorus of Handel.

Taking solo parts are Mrs. Charles Binder and the Misses Eva Borg and Martha Boyd.

NARCOTICS DISCUSSED AT CLUB MEETING

The discussion of the narcotic situation in this country but more particularly in California as presented by Joseph O'Farrell, deputy chief inspector of narcotics, Monday at the meeting of the Country Woman's club was very informative and arresting.

Classifying narcotics as of two kinds hypnotic and exciting, he stated that under the first are morphine, opium and other derivatives, and under the second, cocaine and marihuana. Of all of these the marihuana is now presenting the worst problem. Its effects are so terrible, inciting to every bestial and sensual crime imaginable, and as it is the blossom and tender leaf of the hemp plant the seed has been readily obtainable and plants grown in our own state.

O'Farrell emphasized the importance of every one familiarizing themselves with the plant and being on the alert to recognize and report any they may see growing. Many perfectly innocent persons have been found to have plants in their yards where seeds had been dropped from bird cages, as hemp seed in one of the grains of mixed sterilized before being sold for birds.

Marihuana is powdered and rolled into cigarettes, or steeped and tobacco moistened with the extract, and is much more easily disposed of than many other opiates.

Mrs. M. F. Hughes, program chairman, had invited Constable Harry Evans, a former member of the narcotic enforcement officers, and a friend of O'Farrell's to introduce him to the club. Mr. O'Farrell spoke very highly of Evan's work on the force and hoped to see him back if and when that department is restored to even its former quota of officers. There are only 15 to cover the entire state. The least number should be 25 and ought to be 50.

Mrs. Hughes presented Josephine Barbano who sang two lovely solos, and Paul Farnham who gave two

New Theater To Open Soon

A representative of the Press was accorded an oral and visual preview of Campbell's new de luxe theater now under construction and rapidly developing under the hands of several contractors.

Basic electric wiring is all in and the ventilating fan system will soon be installed. Completely fire proof, the building will have circulating hot air heating, from a gas system.

Dressing rooms are located at the east and west sides of the lobby and the balcony is reached by flights of stairs rising from opposite sides of the lobby.

Lodge seats in the balcony and the seats on the ground floor will all be stepped, affording a clear view of the screen. The owner stated that all seats will be new and of the best. There will be 125 loges and an entire seating capacity of about 600.

Decorations, lighting and furnishings will all justify the title of a de luxe theater, where he stated also that first run pictures will be shown.

Opening date has not been set but will be about the middle of May.

LIFT ITS FACE

• Your own home can have "its face lifted" with a Sherwin-Williams Paint Job, permanently and economically.

• See how this is now being done with two coats only at 75 South First Street.

• Drop in and let us give you particulars.

WHO'S NEWS THIS WEEK

By LEMUEL F. PARTON

NEW YORK.—When James D. Ross was appointed by the President as chief of Bonneville, the biggest dam in the world, in October, 1937, it was believed in some quarters that his selection would sharpen the disagreement between the administration and the power companies. Today it appears that Mr. Ross has allayed, rather than provoked hostilities. The utilities rate him as "reasonable." Bonneville has been the bete noir of western power development. This writer hears there is now a better chance for two-way appeasement than at any time in the past.

Mr. Ross, for 20 years head of the municipal power development of Seattle, has human traits which perhaps account for his expedient rather than doctrinal trend. No mere doctrinaire would amuse himself by keeping a copper ball in the air with no visible means of support—just because he loves kilowatts and likes to see them work.

He was a consulting engineer for the New York power authority and the St. Lawrence seaway, a consultant for PWA power development and later a member of the SEC before the President made him the Bonneville boss. As a boy, he rode his bike from Chatham, Ont., to New York city, to learn pharmacy. He got a job as an apprentice chemist, but pestling seemed piffing, so he hit the long grind back to Chatham—but he kept on pedaling. He headed up through Edmonton to the Alaska gold-fields, and when dry land failed him, he made his own boat and pushed on. In Seattle, years later, he helped design the first municipal power plant.

YOUNG America is naturally envious of Capt. Harold E. Gray, who will be at the controls when the Yankee Clipper, huge Pan-American Airways flying boat, takes off for its flight across the Atlantic. It is now trying a few preliminary crops around New York harbor.

Captain Gray, it seems, had a system, in qualifying for this stellar role in aviation. First he became a licensed airplane mechanic; then he qualified as an aeronautical engineer, a master mariner and a radio technician; after all, he took diplomas in meteorology, seamanship, international law, admiralty law and business administration.

That seems to be about par for the lad who would be a skipper on one of these new leviathans of the air. All this, and many years of hazardous flying over the mountain wilderness of Mexico and Central America bring Captain Gray to the ripe old age of 33. He left college in his second year at the University of Iowa and was aloft for the first time at the age of 19. His home town is Guttenberg, Iowa.

WARREN LEE PIERSON, head of the Export-Import bank, appears to rate an assist in the Nazi put-out in Brazil. The big credit deal, to clear the trade ways between the two countries, is widely accepted as a goose-egg for the Reich.

The young and energetic Mr. Pierson, who became head of the bank in 1936, toured the Latin-American countries last summer and fall and returned with a lot of sizzling new ideas about hopping up South American trade, and resisting the totalitarian drive, by deploying credit judiciously where it is needed most to grease the trade run-around.

When it came to Brazil, he got eager attention from both the state department and the administration, as Brazil is an important consideration of naval geography as well as trade. Shouldering far out into the Atlantic, with the new fascist threat, if hostile, pinch us in a narrowing seaway, with Argentina, on the whole not so clubby with the U. S. A., away down under. For both strategic and commercial reasons, Brazil is our entrepot to South America, if we keep on being neighborly.

In Harvard law school Mr. Pierson was obsessed with foreign trade and directed his studies to practice in this field. Practicing law in Los Angeles, his opportunity came in 1934, when he was appointed general counsel for the Export-Import bank. In 1936, there was, for him, a timely New Deal row, which resulted in the resignation of George N. Peek as head of the bank and the upping of Mr. Pierson.

Bruckart's Washington Digest

Official Washington Is Watching Europe Events With Uneasy Eye

State Department Voices Disgust of American People At Hitler's Dastardly Actions; Our National Resources of War Materials Should Be Developed.

By WILLIAM BRUCKART

WNU Service, National Press Bldg., Washington, D. C.

WASHINGTON.—Obviously, official Washington, as indeed the whole world, has been watching what has been going on in Europe in the last few weeks. They have been watching with more uneasiness, more genuine fear, how Hitler has been expanding the Reich, seizing, crushing, stealing, new territory, subjugating new peoples, as his insane ambition leads him on and on. Those charged with official responsibility have watched because there can be no mistake about the dangers inherent in this wild remaking of the map of the world.

Our government has had the courage to speak out, through its department of state. It has said the Hitler action in overpowering the peoples of Europe, the minority races, is a dastardly thing. There was nothing else that could be done about it. Secretary Hull and Under Secretary Welles, of the department of state, have left no doubt in the minds of other nations, however, that we, as a people, are angry about what Hitler has done. But again: we can do nothing more than protest, because the United States has no business going to war over some other nation's troubles.

But while our state department has been getting on record with its disgust, and there has been a great deal about strengthening our national defense just in case trouble would break out and involve us, Washington bureaucrats and some selfish elements in congress have been foiling correction of our greatest weakness. President Roosevelt has used his most patriotic voice to force action by congress in development of airplanes for defense, in construction of new battle boats and has moved strongly for production of equipment, guns, and the like.

Strategic War Materials That Must Be Developed

But with all of this hullabaloo, we have not heard nor seen any plans for development of our national deposits of raw materials which are used in the stock pile of war resources. It might not be so important were it not a fact that a score or more of these materials have to be imported. I regret the necessity for being so bold, but it is proper to say that our war and navy departments have advanced not a single program, or even a thought, as to how this nation could gain certain raw materials if we were to be involved in a war that would cut off importation of them.

The war department has prepared a list of some of these "strategic war materials" and it has listed some of the most important, such as nickel, tin, manganese, rubber, etc. That is as far as it has gone. It is true, and the swivel chair officers will stress the fact, that congress passed a law a few years back that was designed to encourage American production of these essentials. It was called, popularly, the buy-American act. It even went so far as to afford authority for payment of premiums, up to 25 per cent above foreign quotations, in order that American capital would go to work here on these essentials. But has anything resulted from it? The records answer, no.

A congressional committee also lately has answered "no" by drafting another bill to encourage production in the United States of these war essentials. The house committee on military affairs has reported a bill which Chairman May hopes will do the work, but even Chairman May is doubtful of its success. He is doubtful because, as he said, when the bureaucrats in the executive branch of the government do not want to encourage domestic production, they simply sit in their chairs and swing their feet back and forth.

Officials Unwilling to Learn From Other Nations

Those fellows in the executive departments apparently are unwilling to learn from other nations either. I came into possession of a document, for example, that made a confidential report to the national emergency council more than a year ago. It told that the British government had stored in warehouses enough nickel and tin for a three years supply to be used by industries manufacturing war materials. This was done by the British government, notwithstanding the fact that London is the seat of the great International Nickel corporation which owns the largest nickel mines in the world and does 88 per cent of the world's trade in nickel. The British thought it was wise to have the essential material available, when and if needed, and it had that conviction even with the largest nickel mine known now located on British territory at Sudbury, Ontario, Canada.

Further, according to that report, the British were unwilling to leave the main nickel refinery on United States soil. It was moved to a Canadian spot where, according to the report, it would be "out of distance of any long range guns." The

British royal commission which made the study added that while they and the United States are friendly and none can see any reason for that friendship ever to be disturbed, "no man can forecast the future."

"The shortage of nickel," said the report, "might be a weakness sufficient to determine the issue of a war."

I discussed this question of war essentials with various members of the house—Representative Murdock of Arizona, Representative Francis Case of South Dakota, Representative Scrugham of Nevada, among others. To a man they said that the will of congress was being thwarted by bureaucrats who are unwilling to encourage American industry. Mr. Scrugham, for instance, a former governor of his state and a mining man, told how the bureau of mines had reported there was no worth-while nickel deposits in Alaska. The same agency has found no reason to encourage American capital to develop manganese deposits in the United States. Mr. Case has been trying to get congressional action on measures to get some of the metal deposits of South Dakota, but always selfish corporate interests, seeing no further ahead than the point of their red noses, have stalled the programs.

Pleads for Money to Develop Mineral Resources

Mr. Murdock, also a mining man, made a plea on the floor of the house the other day for congress to provide some money enabling realistic procedure with respect to our unknown and undeveloped metal resources—so that we would know in case of war, if for no other reason.

"Since my school boy days," said Mr. Murdock in house debate, "I have been told that Alaska is a treasure house of natural wealth and economic resources." I believe we have been and are overlooking that fact in our dealing with that far off corner of our country. I feel that we ought to develop those resources; we ought to know more about them.

Mr. Murdock's statement causes me to ask the question: since it is our national policy (at present, at least) to spend billions of dollars under the guise of making work, why not designate some few of the millions for worthwhile national development?

Reference was made the other day to testimony given two years ago before the senate finance committee. I looked it up and found that the late Francis P. Garvan, then president of the chemical foundation, had caused an investigation to be made of Alaskan metal resources. The report brought in by a Wisconsin university professor, who did the searching and digging on the ground, makes one wonder what undercurrent of influence has prevented the development of metal claims, such as nickel and tin, up to now. Very few of the national legislators knew of the testimony.

Buying for Reserves Would Start Brand New Industries

In my conversations among Rocky Mountain congressmen, I could not avoid the conclusion that capital funds held in the United States will not be put to work on such things without some encouragement from officials in Washington. I know that some representatives and senators are of the opinion that the federal government ought to offer to buy these war essentials here and disregard foreign sources. They believe that a commitment to buy for reserves, if made by the federal government, would start brand new industries going in many, many parts of the United States. All of the while, however, we have the bureau of mines and the war department sitting back and making it hard for Americans to develop America.

This whole situation would be hardly worth analyzing were it not for the facts: 1. The federal government is spending billions for defense, along with other billions that are being wasted, and 2. It is a measure of safety to have all, or as much as possible, of the things we would need, in event of war, where they can be handled by Americans for Americans. And it is more important, too, because numerous reports have reached Washington in the last year to the effect that German, or Belgian or British capitalists have been making overtures to holders of American mining claims for operating leases on properties that yield such things as essential war metals. It is my belief that sooner or later congress will learn that the bureaucracy, which it created, has wasted too much time; it will learn that foreigners own all of the metal resources here—and we will be buying back the finished material at the prices foreign monopoly cares to establish—just as we are now buying nickel.

Star Dust

★ Ties That Don't Bind
★ Gene Charms Royalty
★ Listed for a Beating

By Virginia Vale

JOSEPH BENTON NORTH has performed fifty-two marriage ceremonies, and not one of them had any lasting effect. He can recite the marriage rituals of forty-seven varieties of religion, ranging from the voodooistic ceremony to that of the Church of England, but he uses a mixed ritual which he made up himself. As you've probably suspected by now, he is a minister without portfolio, one who officiates only in the movies.

Of the many screen players whom he has "married" North reveals that Claudette Colbert exhibited the most nervousness; he thinks that was because she is the most religious. The calmest person, he says, was Rochelle Hudson; she took two of his ceremonies in her stride, and

CLAUDETTE COLBERT

apparently thought they were amusing. Laura LaPlante cried, and Marlene Dietrich kept arranging her hair and dress.

His most recent appearance on the screen as a marrying man was for "Wuthering Heights." Merle Oberon and David Niven were the bride and groom, and he used the ritual dictated by the period.

The Princesses Elizabeth and Margaret, of England's royal family, were asked recently to name their favorite motion picture star. Ignoring Norma Shearer, Janet Gaynor, Clark Gable, and the other top-notchers (including Shirley Temple) they replied "Gene Autrey."

When Billie Burke broke her ankle she was considerate enough to pick a perfect time in which to do it. She tripped as she was leaving the "Maiden Voyage" set, and snap went the ankle. Being a seasoned trouper, her first thought was of the picture, and the delay that might be caused by her accident.

But it happened that all of her walking shots had been made. She was due just to sit in the rest of the picture anyway.

How'd you like to look ahead to taking a beating? That is what Walter Pidgeon has been doing. For "Six Thousand Enemies" is slated as his next picture, and the script calls for him to be soundly beaten by one of the six thousand—with a husky pugilist selected by the casting department for the role. Pidgeon has been using his spare time between scenes of "Penthouse" to practice up a bit, but he is none too optimistic about his own skill, even though the script does put a limit on the amount of damage that is to be done to him.

Fred Allen is one of the few radio stars who does not own a farm. He hasn't a car, either; he prefers to live in a hotel and ride in taxis. Most of the big-time radio stars feel that they can't get along without a country home. Frank Black, Paul Whiteman and Benny Goodman have farms in Pennsylvania; Lanny Ross and Lowell Thomas each own acreage in New York state; Tommy Dorsey's place is in New Jersey, and Morton Downey's in Connecticut. And if you don't believe that they really turn into farmers whenever they get a chance you ought to hear them talk!

Those radio introductions are likely to go haywire, as did one in which Pat O'Brien was involved the other day. He went to the midgeut auto races in Hollywood with Norris Goff, who is "Abner" of radio's famous "Lum and Abner" team. Barney Oldfield, the former auto racing champion, introduced them as follows: "Norris Goff, better known as 'Abner' on the radio, and Pat O'Brien, who plays 'Lum.'"

ODDS AND ENDS—The reason that movie studios aren't more lavish with their screen tests is that the average test costs \$10,000. The death of Ernie Hare deprives radio of one of its most beloved old-timers. Look as if the "Castle Walk" would outstar the "Lambeth Walk" as the most popular dance when RKO releases "The Story of Vernon and Irene Castle" with Rogers and Astaire.

FARM TOPICS

HATCH EARLY, GET PROMPT PRODUCERS

Pullets Should Come Into Late Summer Yield.

By Dr. W. C. Thompson, Poultry Department, Rutgers University, WNU Service.

Plan spring egg hatches so that there will be pullets starting production for the duration of the late summer and fall months for a more nearly balanced income through the year.

Judging from the experiences of many hundreds of poultrymen during recent years it would seem to be an economical and efficient practice to plan to bring off approximately 25 per cent of the total number of chicks desired during 1939 as early hatched, so that the pullets from those hatches will come into egg yield in late July or during August. Such early-hatched Leghorn pullets would reach first egg about August 1 and continue in satisfactory production until mid-November. If such early-hatched pullets are put under artificial lights in the late fall, a tendency toward partial molt and a somewhat reduced egg yield can probably be avoided.

Late summer or early fall egg prices are usually good, for the supply of fresh eggs at that season is often low. To be able to take advantage of that situation the poultryman would do well to consider starting his chick season early. Another advantage of having 25 per cent of the chicks early-hatched is that it makes possible a more economical and efficient use of incubation and brooder equipment.

Colt Gains Most Weight During the First Year

More than 50 per cent of the total increase in weight from birth to maturity occurs during the first year of a colt's life. Seventy-five per cent of the increase in depth of chest takes place during the same period. This means that adequate feeding is essential if the proper growth of the skeleton is to take place, asserts an authority in the Michigan Farmer.

Colts that are being raised for sale are in greater demand if they are kept in good condition. Liberal feeding of grain and hay will accomplish this. On the other hand colts will develop into good farm work horses if they are fed limited grain rations but are allowed plenty of good hay. This system is economical and produces horses that are sound in their feet and legs. A good grain mixture for the first two years consists of two parts by weight of corn, two parts oats and one part wheat bran. Mixed hays, such as timothy-alfalfa and timothy-clover, are satisfactory. Good pasture helps reduce the amount of grain and hay needed and results in cheaper production. Provide salt as needed and have plenty of fresh water available at all times.

Food and Drink

California orange growers have an easy method of applying fertilizers to their groves, according to the Country Home Magazine. They dump them into the irrigation stream and let the water do the work. Some of them buy their nitrogen fertilizer in the form of compressed ammonia gas, which comes in 150-pound cylinders. The cylinder valves are opened just enough to allow the ammonia to bubble out slowly into the water, which rapidly absorbs it and carries it down the irrigation furrow.

Making Chicks Grow

Growing chickens need some form of vitamin A to make satisfactory growth. Birds allowed to range about the farm during the growing season usually pick up sufficient quantities of green feed, but birds confined should have some feed that is rich in vitamin A. Alfalfa-leaf meal is one of the most economical sources of vitamin A, when all feeds must be purchased, and may serve as the sole source of this vitamin.

In the Feed Lot

Losses caused by internal parasites of sheep can be reduced if the flock is treated before being turned on pasture.

Ohio experiments show that it is possible to grow more feed nutrients per acre with a "grass" rotation than with a "grain" rotation.

Colorful reminder of early cattle days, brands still are a symbol of ownership in the West.

Radios in poultry cars now lull the chickens to sleep, says a Nebraskan in the Wolbach Messenger.

Battery brooders provide a good means of starting chicks, especially where large numbers of chicks are handled and where several different hatches are made.

For control of scaly leg mites dip the infected legs in pure kerosene, taking care not to wet the skin or feathers. Crude petroleum is also very effective for this purpose.

SYNOPSIS

Richard Exon, a poor young Englishman, befriends elderly Matthew Gering, who at his death, gives him a statement claiming he, Gering, is Rudolph Elbert Virgil, Count of Brief, of ancient Austrian nobility who was betrayed 20 years before by his twin brother, Ferdinand, whose sentence for forgery he himself served. Ferdinand appropriated his title, property and daughter. Before he dies, Gering tells Exon there is a family secret, known only to the head of the house, to be found in the great tower at Brief, by a doorway none can ever find. Exon inherits his uncle's fortune and sets out to right Gering's wrongs. En route he encounters Percy Elbert Virgil, son of the villainous Ferdinand and sees him in conference with Inskip, a diamond merchant. He engages a valet, Winter, who hates Percy and meets by chance at a garage, John Herrick, who is a linguist and who as a youth served as a page at Gering's wedding, and had visited Brief. Herrick, due eventually to fall into an inheritance, is at present unemployed and seeking pleasant work to while away a few months. Exon and Herrick establish headquarters at Brenda Revoke's farm at Raven, a few miles from Brief and make their plans. They find the castle almost inaccessible at first, but at the mouth of the entrance drive several days later, they see a closed car occupied by Percy Virgil.

CHAPTER II—Continued

We were now approaching the foothills among which the castle stood, but the drive was so serpentine and the trees by its sides were so thick that we could not see what was coming for more than some 50 paces beyond each bend. We, therefore, took the precaution of leaving the road for the bracken before we rounded a curve, to make sure the next reach was empty before we exposed ourselves. That we did so was just as well, for a quarter of a mile further on, I lifted my head from the bracken to see the closed car at rest in the midst of the way. One of its doors was open, and someone within was speaking with Percy Virgil, who seemed to be very angry and was pointing the way we had come.

Be sure I dropped like a stone, and Herrick, moving behind me, followed my lead.

The car then began to move backwards slowly enough.

Now the drive was not wide enough to allow any car to turn round, but a track ran out of the drive some six or seven paces from where we lay. By making use of this track, any chauffeur could turn any car, and I was ready to wager that here the car would be turned. Sure enough, in a moment or two, we saw the body swing backwards into the track. For that, I should have been wrong, for the car did not stop until it was four or five paces clear of the drive, when the chauffeur applied his hand-brake and switched his engine off. The car had been parked.

As somebody opened a door, Percy Virgil strode out of the drive and into the track.

Here I will say once for all that throughout this tale I shall report in English such speech as was used. Much was, of course, said in German, but though, when I heard it, I did not know what it meant, Herrick translated it for me as soon as ever he could.

As he came to the car—"Where's the wire?" snapped Virgil. "Or have you forgotten that?" "It is here," said another man. "And the change of clothes?" "Also," said a woman's voice. "All marked, as I said?" "That is so."

"Then follow me," said Virgil, "and bring the wire." Cautionally raising our heads, we saw the procession set out—first Virgil, then the man, then the woman, with a dog on a lead. The chauffeur brought up the rear. They passed behind the car and disappeared in the wood.

When Herrick explained what had passed, I put hand to my head. "What on earth does it mean?"

Herrick shrugged his shoulders. "Unless," he said, "dear Percy is making a film . . ."

"Which is absurd," said I. "But so is everything else. And where does the dog come in?"

"Nothing comes in," said Herrick. "It's all preposterous. But I'm glad to have seen dear Percy—extremely glad."

Having seen and heard what we had, I was for following Virgil, to see what his business might be, but when I suggested this, Herrick raised his eyebrows and glanced at his watch.

"As you please," said he, "but it's now getting on for five, and the outdoor staff will be up and about by six. If we turn aside and start stalking Percy and Co.—and it means stalking, mark you: not whipping along a road—by the time we get back to our job, we may find that we've missed the tide."

This was sheer common sense, so I said no more.

Ten minutes perhaps had gone by when the drive curled between the foothills and then swung round to the left and began to climb. Almost at once the woods on its right fell away, and there was the castle before us, perhaps 300 yards off.

sky and these and every projection that caught the light were throwing shadows so vivid that the castle looked heraldic and might have been a blazon of black and gold. It was built of gray stone and must once have been a fortress of considerable strength, but windows had later been set in its massive walls and chimney-stacks had been added to make it a residence.

Herrick, I think, was more excited than I, for, now that he saw the castle as he had seen and known it when he was twelve years old, he began at once to remember the plan of the house: since this was all to the good, I let him be and myself began to survey the heights which we hoped to use.

Almost at once I remarked that on one of these, three firs were standing together to thrust a gray-green steeple into the sky: this, I was sure, could be seen from the farther side and so would make us a landmark for future use. The next thing I saw was a path which slanted up from the meadows into the woods, and when I had taken my glasses, I found that it led to an elegant belvedere, or open summer house. This looked unfrequented, and but for my glasses I could not have picked it out, for the trees which had been cut back had put forth new boughs. Because of the veil of foliage, nobody standing

It was nearly six o'clock, and I had been gone from Herrick a full half-hour when the track beside which I was moving came to an end. This to my dismay, for now I had nothing to go on, although, of course, the track might have led me wrong.

In vain I sought for a broken stem of bracken which might declare the trail which my friends had left: in vain I scanned the forest and strained my ears: but for the birds and the squirrels, I might have had the world to myself.

Flat against the trunk of an oak tree, I wiped the sweat from my face. Five paces ahead a ride had been cut through the woods: though this was thick with bracken, it gave me a pretty clear view to right and to left, but the flood stretched smooth and unbroken and I could see no sign of its having been crossed.

Loth to admit defeat, I tried to think what to do. To proceed was easy enough, but, for all I knew, with every step that I took I might be going away from the party I sought. Yet to stay where I was was useless. If only there had been a hillock to add a few feet to my height, I could have looked down upon the bracken and that point of view might have shown me the traces the others had left. But there was no hillock: the ground here-

west of the house, and rose, on the right, to a circus, whence three other rides ran out, as spokes from a hub. Across the ride two definite trails had been left—or, rather, one and a half. The first, which stretched right across, was 30 paces away, to the left of the oak; and the second, which stretched but halfway, as far to the left again. At the end of this second trail, full in the midst of the ride, the woman was sitting alone, with her back towards me.

To say that I felt bewildered means nothing at all. What on earth she was doing there, I could not conceive, and at last I made up my mind that she must be hiding from Virgil with whom she had had some fuss. Of him or the other two men, I could see no sign.

Now but for the sight of the woman, I should have at once descended and taken the other trail, but whilst I was still considering whether to follow this course, the woman got to her feet and stood perfectly still.

When I saw her do this, it came to me in a flash, that, unless the woman was mad, she must be acting in concert with somebody else. And so she was. Before two minutes had passed, the chauffeur appeared.

He made his way straight to her side, when the woman handed him something and then hurried out of the ride and so out of my view.

Preparing to descend, I had turned about and was standing upon the branch with my hands on the trunk, when the scream of a dog in agony rent the air. Half-turning again, I saw the chauffeur standing where I had seen him last, holding the dog at arm's length by the scruff of its neck and flogging the luckless creature with all his might.

I was just about to cry out when I heard a galloping horse coming down from the right, that is to say, from the circus from which the four rides ran out.

Because of the leaves before me, I could not see it go by, but an instant later a bay flashed into my view. On his back was a girl, and the two were going full tilt down the midst of the ride, and making straight for the chauffeur still thrashing the dog.

So for a second or less. Then the bay turned head over heels and the girl went flying beyond him, as though shot out of a gun.

I never saw such a fall in all my life, but before I had time to think, much less to descend, a man and a woman were rushing to where the girl lay. They were, of course, the two that came out of the car and they must have been standing directly in line with the bay when he came to the ground. And the chauffeur, too, was running as fast as he could.

The bay was up now and was moving off through the bracken with heaving flanks, but the girl lay crumpled up and perfectly still. To my surprise, instead of attending to her, the man and the woman between them lifted her up and began to stumble with her towards my oak. They passed directly beneath me, seeming to think of nothing but getting their burden along. Had this been the carcass of a dog, they could scarce have used it with less propriety. The girl was dead or senseless—I could not tell which: but, instead of supporting her head, they let this hang, and one of her legs was suffered to trail on the ground.

This was too much for me, and at once I began to go down; but, for all my indignation, I could not make haste, because, as I had feared, the descent was twice as stiff as the climb I had made.

(TO BE CONTINUED)

Cautionally Raising Our Heads, We Saw the Procession Set Out.

there could ever be seen from below, yet he could see as much as he wished by peering between the leaves. To reach this spot from above looked easy enough, for it hung a short 30 feet below the crest of the hill and the ground between was covered with beech and fir.

This was enough for me. My one idea was to make for the Rolls and then to go round by road and get to the belvedere as soon as ever I could. But Herrick, deep in memory, would not be moved.

"Why rush your fences?" he said. "We've plenty of time. I'm doing lovely work—I can even remember a picture that hung in the dining-room. That's the dining-room at the end. You can't see the stables from here—they're behind to the left. But what I'm on now is the tower. I think it rises from the courtyard—I'm almost sure. But I know that it had a door on the second floor. The courtyard's beyond that archway—not very big . . . You go on, if you like—I shan't be long."

I had a sudden idea. "All right," I said. "I'll go on. And on the way I'll see what Percy's up to."

"What could be better?" said Herrick. "But don't get involved. We're here to find out—not give battle. Don't forget that."

"I promise," said I. "Don't be long, and with that, I was gone."

Retracing my steps, I did not use the drive, but moved by its side through the bracken beneath the trees. As I approached the track, I saw that the car was still there and had not been moved.

Now all I knew was that Virgil and his companions had passed up the track out of sight. How far they had gone or whether they had kept to the track, I had no idea, but since it seemed pretty clear that they would not be very far off, from now I took greater precautions against being seen. When I moved, I did so gently and went on my hands and knees, and whenever I rose to look around, I did so against a tree-trunk, as though, indeed, I were stalking some wary prey.

First of all, I took a good look at the car. This was roomy and powerful and something the worse for wear. Its number-plates had been oiled and were coated with dust. One of its doors was ajar, and within I could see an old suitcase, no doubt containing "the clothes." But that was all, and after a long look round, I went on my way.

abouts was sloping, but nothing more.

Suddenly I thought of the oak tree and lifted my eyes . . .

If I could reach it, there was the place I desired. One of the mighty branches was stretching out over the ride—a branch twice as thick as my loins, some 20 feet up. If I were there, I could see for a quarter of a mile, while the leaves of the lesser boughs would save me from being seen.

After a long look about me, I leaped for a sturdy sucker and swung myself up. My branch was not easy to come to, because what handhold there was was so far between, and I must confess that, whilst I fought my way up, I could not help wondering how I should ever get down. However, I would not turn back, and after two or three minutes I flung a leg over the perch upon which I had set my heart.

I now had a very good view of the whole of the ride, which sloped, on the left, to the meadows south-

Machinery Increases Production of Corn Twentyfold, Agricultural Bureau Reports

Machinery development, which has enabled man to use energy supplied by animals and tractors instead of his own muscles, makes it possible for the individual farmer, who a century ago could grow five acres of corn, to plant, cultivate and harvest 20 times as much today.

Recent investigations by the United States Department of Agriculture in co-operation with the Iowa Experiment station show that the modern farmer expends no more time or labor in producing 5,000 bushels of corn than did the farmer of 100 years ago in producing 250 bushels. "Primitive cultural methods used by Indians were not a great deal different from those of today," says R. B. Gray, of the bureau of agricultural engineering. "The difference is in the tools that are used."

In 1855, Gray points out, the corn farmer used a walking plow, a single section or "A" harrow, and a shovel plow for marking off rows. He planted by hand, covered the seed with a hoe, cultivated with the same one-horse shovel plow, and harvested by hand. With this equipment he needed 33.6 hours of labor to grow one acre of corn.

Thirty years later the farmer had the two-bottom gang plow, the disk harrow, a two-row planter, a two-section harrow, a single-row cultivator, but still harvested by hand. With this equipment he was able to grow and harvest an acre of corn with 15.1 hours of labor.

With the all-machine age of 1930 the farmer had available a tractor, a two-bottom gang plow, seven-foot tandem disk, four-section harrow and pulverizer, two-row planter, and a two-row picker or harvester. This cut the man-labor hours to 6.9 per acre.

Further improvements in machinery within the past eight years—including four-row planters and cultivators and general purpose tractors—make it possible now to produce an acre of corn with five hours of labor, says Gray.

How Leaves Generate Heat

In hot, dry climates the friction of the leaves of trees rubbing against one another in a strong wind has generated sufficient heat, it is believed by some scientists, says Collier's Weekly, to have caused forest fires.

What to Eat and Why

C. Houston Goudiss Offers Practical Help in Planning Meals That Avoid Hidden Hunger; Illustrates Right and Wrong Methods of Menu Building

By C. HOUSTON GOUDISS

A GENERATION ago, homemakers approached the problem of feeding their families with but two objectives: to put weight on their children and to send adults away from the table with their appetites appeased. If the child failed to gain satisfactorily, or if his teeth were crowded and subject to decay, he was said to "take after his Uncle Abner" or perhaps to have inherited

the poor teeth of his maternal grandmother. And if adults were chronically tired or suffered from "nerves," that, too, was blamed on circumstances that had nothing to do with the diet.

No one had ever heard of hidden hunger! For nutritionists had not yet startled the world by demonstrating that food may satisfy the appetite and yet fail to feed . . . that the absence of minute amounts of minerals and vitamins may be responsible for a long train of deficiency diseases which cause untold misery and are responsible for mental and physical inefficiency.

Planning Meals Scientifically

Today we know that a definite relationship exists between food consumption and bodily activity, and that normal individuals can usually control body weight by regulating the amount of fuel foods in the diet. We know that minerals and vitamins play a powerful part in building and maintaining sound teeth as well as healthy nerves; and that we can build resistance to disease, defer old age, and even lengthen the span of life by choosing our food, not merely for its appetite appeal, but for the qualities that contribute toward what nutritionists term a balanced diet.

The Balanced Diet

Every modern homemaker therefore owes it to her family not to plan meals at random, but to take into consideration the seven factors that science has determined to be essential for top health. These include: protein for building and repairing body tissue; carbohydrates to produce quick heat and energy; fats, a more compact form of fuel; minerals, which serve both as builders, and as regulators of body processes; vitamins A, B, C, D, E and G, which act as regulars, and help to prevent the various deficiency diseases; water, which serves as a vehicle by which food is carried to the tissues, and cellulose or bulk, required for the normal functioning of the intestinal tract.

A Day's Food Plan

The various food essentials will be supplied if the three daily meals include a quart of milk for every child, a pint for each adult, which may be served as a beverage, with cereals, in soups, sauces or made into desserts; an egg daily, or at least three or four weekly; one serving of meat, fish or chicken, usually at the main meal of the day; a second protein

food, such as cheese, baked beans or nuts, usually served at lunch or supper; two vegetables besides potatoes, one of which should be of the raw, leafy variety; two servings of fruit, and at least one serving of a whole grain cereal.

By adhering to this plan, you will help to supply your family with the necessary proteins, minerals, vitamins and cellulose. Fuel foods may be added by way of breadstuffs, macaroni, rice and other cereals; butter or margarine and the fats used in cooking.

Common Errors in Menu Planning

Common mistakes in menu planning are a concentration of too many proteins or carbohydrates in one meal; the failure to include adequate bulk by way of fruits, vegetables and whole grain cereals; and the massing in one meal of too many foods that are high in fat.

The following menu, for example, contains more protein than necessary, and too little bulk, yet it is typical of the dinners served in many homes: Hamburger Steak, Baked Beans, Potatoes, Stewed Corn, Custard Pie.

Since both meat and baked beans are rich in protein, they may well be served at separate meals, as indicated by either of the following combinations: Hamburger Steak, Creamed Potatoes, String Beans, Lettuce Salad, Fresh or Cooked Fruit. Or, Baked Beans, Stewed Tomatoes, Cabbage Salad, Custard Pie.

In the first menu, the beans, potatoes, corn and pastry are all high carbohydrate foods. To provide additional bulk, as well as to reduce the amount of carbohydrate, it would be advisable to serve a green vegetable such as string beans, and choose fruit instead of pie for dessert. It is assumed, of course, that eggs would be given in some other form during the day.

Since baked beans contain both protein and carbohydrate, we omit potatoes in the third menu, and serve a food rich in vitamin C—the tomatoes, and add a bulky raw vegetable by way of the salad.

It's Balance That Counts

It requires no more time or effort to prepare nutritionally correct meals than those which lack balance, nor is it more expensive. For elaborate meals can lack balance, if they are deficient in minerals, vitamins and bulk, while those composed of such simple foods as bread and milk, and stewed fruits may provide an abundance of the protective substances which satisfy the hidden hunger of the body.

My plea to homemakers is to give less thought to the preparation of elaborate recipes, and more thought to supplying the food values that will create abundant health and vitality. In that way, I believe we shall take a real step forward in human progress.

HOW to SEW By RUTH WYETH SPEARS

framed and lend a gay note at each side of an old mirror.

NOTE: Book 1, Gifts, Novelties and Embroidery, gives full instructions for ninety embroidery stitches with many sketches showing ways to use them. You and your children may have happy hours with this fascinating hand work. Book 1, SEWING, for the Home Decorator, contains 48 complete lessons for making slipcovers, draperies, bedspreads and many other things for the house. Books are 25 cents each. If you order both books, crazypatch leaflet, reviving interest in this old-time hand craft, is included FREE. Address, Mrs. Spears, 210 S. Desplaines St., Chicago, Ill.

And of All Things—Hitched to a Milk Cart!

It was early morning. Driving home from a party was a young chap somewhat the worse for liquor, steering a course that would have puzzled a snake to follow.

Round the corner came a milk cart, the driver of which did all he could to get out of the drunk's way, swerving from side to side.

For a moment the car wavered, then it stopped abruptly. Out sprang the tipsy fellow.

Looking up at the other driver with a look of tremendous dignity, he demanded:

"Hi, you! Wash the idea of you driving that intoxicated horse, huh?"

MARY ANN was named for her grandmother, who at the age of nine, made an elaborate sampler of embroidery stitches. Everyone thought it would be nice if the modern Mary Ann could also do a bit of hand work to be framed and kept. We here report, thanks to a series of rainy afternoons, this was actually accomplished.

Mary Ann's mother started the project with a rather large piece of blue gingham; a pair of embroidery hoops and some odds and ends of bright six strand mercerized embroidery thread. Outlines for flower designs were made by drawing around coins and the flowers were embroidered as shown here. Stems were done in outline stitch and leaves in groups of straight stitches.

From the many attempts on that piece of gingham, two flower groups had almost as much life and charm as the modern Mary Ann, age nine. These were neatly

The FARMERS CORNER

by RALPH H. TAYLOR
Executive Secretary
Agricultural Council
of California

California taxpayers have a golden opportunity at the current session of the state legislature—if they recognize it quickly enough, and take hold of it vigorously enough—to clamp the brakes on extravagant state spending and halt the upward climb of state taxation.

For despite the record-breaking state budget which has been submitted to the legislature; despite the demand for more than \$63,000,000 in new taxes which the budget contemplates, and despite the fact that "pressure groups" are clamoring on all sides for "something for nothing"—there is more actual sentiment for a program of sound economy and sensible retrenchment among the members of the legislature than at any other time in many years.

But most legislators, in the final analysis, will vote as the people back home urge them to vote. If the most insistent demand comes from groups and individuals wanting bigger relief payments, bigger pensions, bigger political payrolls and bigger expenditures—most of the lawmakers, in all probability, will vote them, and then vote for new taxes to pay the freight! But if farmers, home owners, business men, wage earners and housewives join in demanding an end to constantly mounting tax burdens; if they actually get on their high horse and out-yell the "yell leaders" hired by government's wards and dependents, there is more than an even chance that the legislators will take the pruning shears to the budget and kill all new tax proposals.

The "battle of the budget," in this writer's opinion, will not be decided in the legislative halls at the state capitol, even though the ballots will be cast there. The battle will be decided in the legislators' home districts—by the letters, phone calls, telegrams and delegations that are sent to Sacramento. The real battle is not between legislators; it is between tax-spenders and taxpayers, with every likelihood that the most articulate and best organized group will win.

California agriculture has much at stake on the outcome of the tax fight at the legislature—for California farmers are among the state's heaviest taxpayers. And if the bi-partisan economy bloc in the legislature, which has shown splendid determination in its fight this session to halt the state's spending spree, fails to receive support from the people back home, there will undoubtedly be drastic tax increases and the collapse of any serious effort toward economy for years to come.

The Agricultural Council of California, representing 40 major farm cooperatives, with 70,000 farmer-members, voted at its legislative meeting recently to oppose any and all tax increases at this session of the legislature—and to work for a policy of trimming expenditures to a point where they can be met with present revenues. In 1933, when the last determined fight was made in the legislature for an economy program (a fight that failed for lack of public support), the farming industry demonstrated its sincerity by voluntarily cutting the budget of its most important agency, the state department of agriculture, more than \$1,000,000. But only one other department in the state government followed suit. And agriculture was penalized at that time for its sincerity by the action of an assembly committee in lopping off \$400,000 more, apparently on the assumption that its sincerity was duplicity—and that it must not need the money. It is hoped that this session there will be a determined stand to treat every department alike, with no favorites, and with intelligent pruning to effect a balance between outgo and income.

William A. Pixley, secretary of the Property Owners association of California, whose group represents more than 100,000 small homeowners, recently pointed the need for public support of the tax reduction crusade, with the forceful declaration: "Taxation is no longer taxation; it has become extortion—and thousands of home-owners and farmers will soon lose their properties and their life savings unless a halt is called. I am assured by Senator Tickle, chairman of the Senate Revenue and Taxation committee, that there is no

Argentine on Treasure Island

This is the interesting facade of the Argentine Pavilion at the California World's Fair which houses an extensive exhibit from the South American nation. The steel and glass construction makes the interior extremely light and attractive.

Portland Acquires "Disaster Service" Unit, Latest Type

The Jay W. Stevens Disaster Service unit was named in honor of Jay W. Stevens now California fire marshal but formerly of Portland, Oregon.

This unit—the first of its kind ever built—consists of a streamlined car 29 feet 6 inches in length, 9 feet 6 inches in height and 95 inches in width, fully equipped with every type of tool, device and machine that experience has taught might be of use or service in meeting disasters or emergencies of whatever nature or magnitude.

The car or unit was designed and built by experts in their various lines. A squad of six specially trained firemen on each shift operates the unit from a central fire station.

The car is all its name implies—a disaster unit complete in itself. Its outstanding features are its portable power plants and its communications equipment. It has a speed of 60 miles per hour; portable power plants capable of flood lighting a village or restoring lighting in a building after regular service has failed; has complete long range public address system capable of broadcasting speech from microphone, radio or telephone, enabling officers to direct rescue or other emergency work from within a burning building or from points far distant; has receiving and sending radio sets installed in gas and smoke helmets to enable radio broadcasting through the public address system from within areas choked with smoke, gas or fire; constitutes a complete emergency hospital and first aid station and ambulance with room to transport seven injured persons at one time. It also is equipped to serve as a field kitchen.

Purposes for which the car is designed and equipped include not only fire, but all such disasters as train wrecks, plane crashes, collapse of buildings, bridges or elevators; shipwrecks, highway disasters, snow slides, earth slides, floods, jail breaks, riots, epidemics, explosions, mine or tunnel disasters, storms, and in fact every type of emergency with which modern life-saving workers may have to deal.

While actual construction required about one year, the car is the product of many years of study, research and investigation. Experience gleaned from disasters of the past has been used in building into this one car all of the hundreds of types of tools, devices and equipment that are not ordinarily available at scenes of disaster and when made readily available may not only facilitate the work of the emergency crews but may be the direct means of saving life and curtailing property loss.

Chief Charles J. Brennan, chairman of the board of Pacific Coast Association of Fire Chiefs said it will be "a long chase and a stern

actual need for new taxes, or increases in existing taxes, if the public will make known to the legislature its demand for a balanced budget—balanced the business-like way, by reducing expenditures to a point commensurate with income. That statement is a challenge to every home-owner and farmer in California to sit down and write his legislator and demand the relief he so badly needs."

For the sake of farm recovery, business recovery and economic recovery in every line of endeavor, it is to be hoped that the economy battle of 1939 fares better than that of 1933. New taxes at this time would be little short of a catastrophe—but the final decision rests with the taxpayers, rather than their legislators.

Ira Abbott has spent part of his Easter week vacation in attendance at the meeting of California Elementary School Principals' association in San Francisco. Lawrence C. Curtis, district superintendent of the Jefferson Union grammar school near Santa Clara was elected to the board of directors and Alton Scott of San Juan Bautista was named vice-president.

Miss Abbie Sykes, former Campbell high school teacher was a guest of Mrs. H. P. Bean from Saturday to Tuesday of this week. She went from here to San Francisco to visit the Exposition for the remainder of the vacation week and will then return to Vallejo where she is teaching.

Mrs. Herbert Gardner was hostess to members of her bridge club last Friday evening at her home on North Union avenue.

Mrs. Tony Raffanti and son Bobby, are in San Francisco all of this week visiting relatives. While there they plan to visit the Exposition at least three times.

Rev. and Mrs. Edwin Bowling visited relatives here Tuesday. They are finding their new work at Watsonville very pleasant and have been accorded a welcome reception.

one" for any city to catch up with Portland in owning such a car. He said as far as he knows it is the best equipped in the world.

Easter will be observed by the Methodist Sunday school at the regular hour, 9:45 a. m. with exercises by the primary department under the direction of Mrs. Elsie Keesling, and a pageant "Bread of Tears" presented by the Misses Veva Nichols and Eva Mitchell.

Mrs. Burdette Heath who has been visiting her brother, W. S. Smeed and family of North Second street, after a sojourn in the southern part of the state with her daughter in Burbank, is returning this week to her home in Seattle.

Mrs. Esther Short, Campbell grammar school nurse, is another of our teachers who is attending a convention during the vacation week. She registered at the physical education and health convention which was in session in San Francisco this week, closing today.

Miss Muriel Carson of the Campbell high school faculty, visited in Hollister, Saturday, where her father is engaged in ranching.

Miss Charlotte Wright, kindergarten teacher at Campbell Union grammar school is spending her Easter vacation at her home in Klamath Falls, Ore.

Bakelite, a Trade Name
Bakelite is the trade name of a synthetic resin produced from coal-tar by a process invented by Dr. Leo H. Baekeland. It is composed chiefly of the elements carbon, hydrogen and oxygen, and the process involves the action of phenol on formaldehyde in the presence of an alkaline condensing agent.

Source of the Nile River
The Nile river, one of the three longest rivers in the world, has its farthest source in the Nyavolonga and the Akanyaru, headstreams of the River Kagera, which flows into the west side of the Victoria Nyanza. The Nile's length is about 4,000 miles. The Blue Nile rises in Lake Tana in Abyssinia.

Gay Fruit M

Pattern 6037

Here's your chance to add color to the kitchen in the simplest of stitchery. Do the large fruit in applique or outline stitch and let the cross-stitch (4 and 8-to-the-inch) give the finishing touch. Make them for the bride-to-be but here's fair warning, you'll want to keep them yourself! In pattern 6037 you will find a transfer pattern of six motifs averaging 4 by 10 inches and the applique pattern pieces; color suggestions; material requirements; illustrations of stitches used.

To obtain this pattern, send 15 cents in coins to The Sewing Circle, Household Arts Dept., 259 West 14th St., New York, N. Y. Please write your name, address and pattern number plainly.

HOUSEHOLD
QUESTIONS

Chilling Canned Goods.—Since paper acts as an insulator, paper wrappers should be removed from canned goods before placing the cans in the refrigerator to chill.

Chill Candles.—Thoroughly chilled in the refrigerator, wax candles will burn slower and last longer.

Cutting Cooking Time.—The cooking time of hominy grits, whole-grain cereals or rice can be shortened by soaking over night in water to cover.

A Spotless Tub.—Baths can be made spotlessly clean if rubbed with a cloth dipped in paraffin before washing them in the usual way, while lemon juice and salt will take off "drip marks."

That's the Spirit.—Silk stockings can be preserved if, when new, they are soaked in methylated spirit for five minutes, then hung up in the air until the smell has evaporated. This treatment makes them ladderless for a long time and the good work will be further carried on if a line of machining is run around the top just below the "suspender line."

Ask Doctor About This Ideal Way TO LOSE FAT

READ EVERY WORD!

Make up your mind now that you'll lose some of that ugly fat and really enjoy life. No one can blame you if you don't want to take harmful drugs, go on starvation diets and do backbreaking exercises. No sane woman would! And for sensible women like yourself who really want to reduce yet don't expect miracles overnight—who are willing to faithfully follow a most simple, inexpensive and pleasant 28-day plan, we suggest this easy method—First of all go light on fatty foods and sweets. Eat plentifully of lean meats, fresh fruits and vegetables. And for proper functioning by removal of accumulated wastes be sure to take a half teaspoonful of Kruschen in hot water every morning. Kruschen is made right here in U. S. A. from famous English formula.

And let's get this straight right now about Kruschen. It is not harmful. It is NOT just one salt as some people ignorantly believe. Look on the box! You'll see it is a blend of 6 active minerals which—when dissolved in water—is similar to the famous medicinal Spa waters where wealthy women have gone for years.

A jar of Kruschen costs but a few cents and lasts 6 weeks. Get a jar RIGHT AWAY! At drugists everywhere.

Watch Your Kidneys!

Help Them Cleanse the Blood of Harmful Body Waste

Your kidneys are constantly filtering waste matter from the blood stream. But kidneys sometimes lag in their work—do not act as Nature intended—fail to remove impurities that, if retained, may poison the system and upset the whole body machinery.

Symptoms may be nagging backache, persistent headache, attacks of dizziness, getting up nights, swelling, puffiness under the eyes—a feeling of nervous anxiety and loss of pep and strength.

Other signs of kidney or bladder disorder may be burning, scanty or too frequent urination.

There should be no doubt that prompt treatment is wiser than neglect. Use Doan's Pills. Doan's have been winning new friends for more than forty years. They have a nationwide reputation. Are recommended by grateful people the country over. Ask your neighbor!

DOAN'S PILLS

Weekly News Analysis

Britain Drops 'Appeasement'

But Policy Even Weaker Now

By Joseph W. La Bine

EASTWARD THE MARCH OF EMPIRE GOES
A week's supply of conquests and objectives.

EDITOR'S NOTE—When opinions are expressed in these columns, they are those of the news analyst, and not necessarily of the newspaper.

Europe

It is easier to hoot at a boxer from outside the ropes than within. If the average U. S. citizen were an Englishman he would be far less critical of a government which eschews war even if it means loss of prestige. But after eight months of a "foreign policy" which is more concerned with immediate convenience than permanent direction, the most peace-loving Englishmen are now beginning to believe Prime Minister Chamberlain might have achieved greater results with no more risk by holding to a steady course.

From the Czech crisis last September until mid-March, Mr. Chamberlain's "appeasement" cries grew progressively weaker as Britain and France strengthened their defense against possible aggression from Dictators Hitler and Mussolini. By March 1 the two democracies were strong enough to suggest dictating terms to the Reich, whose economic position had grown intolerably weak. Then, overnight, all semblance of "policy" collapsed. The events, in sequence:

(1) Hitler grabbed Czechoslovakia, whose boundaries were guaranteed last autumn by France and Britain. Mr. Chamberlain said it was no concern of his.

(2) Two days later Mr. Chamberlain suddenly whipped about-face, accusing Hitler of dishonesty and unwarranted aggression.

(3) Russia, for 15 years unwelcome in British circles, was asked to join London in a pact to "consult" in case of future German aggression.

(4) Britain reversed its course again and made no protest when Hitler occupied Memel, whose ownership by Lithuania was guaranteed by British-French signature of the Memel statute.

(5) Britain backed down on its pact with Russia, refusing any stronger measure than the useless "consultative" treaty.

The substance of these disjointed events is that Britain's "appeasement" policy has given way to no policy at all. It can well be doubted that London sincerely hoped its Russian overtures would have more than a temporary jolting effect on German territorial ambitions. For Britain still wants nothing to do with Moscow; in fact, the fondest Tory hope is that Germany and Russia will eventually lock horns, fighting out the issue of Nazism versus Communism to the ruin of both.

Britain will be happy so long as Hitler drives eastward, confining his ambitions to such objectives as Danzig, the Polish corridor and Rumania, ultimately reaching into the Russian Ukraine to invite war with the Soviet. This conclusion is inevitable because the most concrete result of Mr. Chamberlain's umbrella waving thus far has been a French-British military pact to aid Switzerland, the Netherlands and Belgium against German aggression.

Congress

Europe's Czechoslovak and Memel crises (see **EUROPE**) have brought quicker, more definite reaction in the U. S. than most people realize. Last January, when President Roosevelt made timid suggestions that the present neutrality law should be changed, a terrific uproar ensued. The same uproar returned when he asked a special \$358,000,000 defense appropriation a few weeks later. But the new European situation has brought a remarkable show of inter-party solidarity, admittedly temporary, but strong enough to give France and Britain a strong moral support and warn Reichsfuehrer Hitler that he is not wanted on the western hemisphere.

(1). Undersecretary of State Sumner Welles received both Democratic and Republican praise for his diplomatic protest against Hitler's seizure of Czechoslovakia.

(2). Neutrality legislation expiring May 1 permits "cash and carry" sale to belligerents of anything but war materials. Nevada's Sen. Key Pittman has asked that munitions be placed on the allowed list. Utah's Sen. Elbert Thomas would give the President power to designate an aggressor nation and forbid shipments to it.

(3). Washington's Sen. Homer T. Bone has offered, with bi-partisan support, a bill to tax profit out of war. The plan: Greatly increased tax rates would be imposed in case of conflict, lowering exemptions and imposing surtaxes on highest brackets ranging up to 93 per cent for individuals. Corporations would be taxed 100 per cent on net incomes over 6 per cent of their adjusted declared value.

(4). Within 15 minutes, both senate and house passed the \$358,000,000 emergency defense bill, authorizing 6,000 army planes, stronger Panama canal fortifications, bigger sea-coast and inland defenses, better army equipment and more effective hemispherical protection.

White House

How to raise U. S. price levels is one of the administration's biggest problems. Republican laymen, and many Democrats, contend a retrenchment of federal spending would do the trick. But the White House places more faith in Marriner S. Eccles, federal reserve chairman, and Sen. Key Pittman, Nevada silver advocate. Even these two "doctors" find themselves at odds, however. During a recent public debate they outlined these two opposing paths to the coveted price level.

Pittman. Favors currency inflation, "since government billions have completely failed to raise the price level." Believes federal re-

PITTMAN (LEFT) AND ECCLES
The doctors did not agree.

serve board's periodic increases and decreases in reserve requirements have had a bad effect on business. **Eccles.** Against currency inflation. Partially agrees it would help raise price levels, but fears new money would not be put to use. "Lack of opportunity to get a profit is the principal impediment to recovery today."

Whether the White House could pull a definite monetary program from such an exchange of theories is doubtful. But there are indications that the ideas of Mr. Eccles, famed advocate of spending, hold favor. President Roosevelt told his press conference that he refuses to cut U. S. spending until private enterprise guarantees jobs. Neither will he favor repeal of "deterrent" taxes, apparently, for he has mildly denounced advocates of a slash in the federal budget. But since Mr. Eccles is on record as favoring government action to "remove impediments to the encouragement of private capital," White House and Eccles do not jibe.

Neither do White House and Secretary of Agriculture Wallace jibe. Defending an unchanged AAA for 1939, Mr. Wallace told the house agriculture committee that industrial recovery was a prerequisite to farm recovery, and that industrial activity should be increased 40 per cent as speedily as possible. Then, he said, farmers will secure their just share of the total national income.

Politics

Smart politicians never count chickens before they hatch. But neither do astute political observers forget that it is a high-well impossible job to bounce a favorite from the saddle. Although more than a year remains before Republican and Democratic parties hold their nominating conventions, New York's Republican District Attorney Tom Dewey and Texas' Democratic Vice President John Nance Garner have emerged definitely as men of the hour.

Garner. Sometimes disgustingly independent to President Roosevelt, the vice president has led a powerful Democratic revolt this session of congress and today controls approximately as many house and senate votes as the White House. Though 70 years old, he holds the favor of Emil Hurja, astute party analyst who has indicated there is little chance Garner can be bounced from favor in 1940. The chief Garner opponent is Postmaster General James Farley, whose vote-seeking efforts have been confined to east and northeast states while Mr. Garner concentrates on the Southwest. Many Democrats can see nothing more natural than a union of these two forces, one for President, the other for vice president.

Unpredictable as his father, Texas' Elliott Roosevelt gave politicians a puzzle by announcing that Mr. Garner is "in the driver's seat, well in the lead as a likely Democratic candidate for the presidency in 1940." That Son Elliott holds White House favor for this remark is seriously doubtful. Franklin Roosevelt prefers not to run again in 1940 but will do so unless the party accepts another man who will and can

ELLIOTT ROOSEVELT
Garner in the driver's seat.

carry out his New Deal philosophy. John Garner would not be apt to do this.

Dewey. New York's district attorney lost the governorship to popular Herbert Lehman by less than 1 per cent of the popular vote last fall, but the mere fact that he lost—and that a few weeks earlier his case against James Hines had been tossed from court—cost Mr. Dewey much popularity. But since last November old guard Republicans have dropped from the picture. More-over, able men like Michigan's Sen. Arthur H. Vandenberg have shown disinclination to run. Realizing a candidate must be found soon, G. O. P. voters have unofficially settled on Dewey since he "came back" to convict Hines on the racketeering charge. Whereas a mid-February poll by the American Institute of Public Opinion gave Dewey only 27 per cent of the popular Republican vote, a month later he had jumped to 50 per cent.

People

Resolved, by Michigan's new Gov. Luren D. Dickinson, that no official business will be transacted on the Sabbath.

Headliners

COL. VLADIMAR S. HURBAN

Though a Slovak, and although Hitler has made Slovaks independent of Czechs, Col. Hurban has so much dislike for Germany and Hungary, and so much pride in the late Czechoslovak nation, that he refused to surrender the Czech legation in Washington to the German ambassador. Born in the Carpathian mountains, he knew Magyar oppression as a S. Hurban child. Becoming a soldier, he went to Russia 30 years ago to accept a professorship in the czar's war college. When the World War broke out he and 70,000 other Czechs joined the Russian army. During the revolution these Czechs made their historic movement to Vladivostok, where the group collected funds to send Hurban to Washington. There he joined Dr. Thomas Masaryk in founding the Czech nation. After the government was established he returned to Washington as Czech military attaché, later going to Egypt as charge d'affaires, to Sweden as minister, and in 1936 back to Washington as minister. His greatest accomplishment here was consummation of the Czech-U. S. trade treaty last year, now abrogated under Hitler's "protectorate" regime.

A Quiz With Answers
Offering Information
on Various Subjects

The Questions

1. What is the highest denomination of U. S. postage stamp now used?
2. In what city is found the longest street?
3. What is a metaphor? A simile?
4. What was the family name of Romeo? of Juliet?
5. What anniversary will baseball celebrate this year?
6. What is the most powerful lighthouse in the United States?
7. What is the largest flowing spring in the world?
8. When and from where was the first wireless call at sea sent?
9. What are the largest guns on U. S. battleships?
10. Which five universities in the United States have the largest student enrollment?

The Answers

1. The \$5 stamp is the largest.
2. Los Angeles—Figueroa street—27.5 miles long.
3. Unexpressed comparison; expressed comparison.
4. Montague and Capulet.
5. Its 100th anniversary.
6. It is the lighthouse at Navasink, N. J., which uses 9,000,000 candlepower.
7. Silver springs in Florida has a registered volume of flow of 801,000,000 every 24 hours and is conceded the largest.
8. The first wireless distress call at sea was sent from the East Goodwin lightship in the English channel on January 23, 1899. The

We Cultivate That Field

Politics offers such a tremendous field in which to be bogus.

A father with youthful sons lives perpetually in the midst of alarms.

Everyone may be an idealist; but none should be a zealot. A zealot is a nuisance.

One of the mistaken virtues is candor in the wrong place.

If one earnestly wants to be a gentleman he can be one. The rules are plain.

Let Us Add Courage

Confucius recommended five moral virtues—humanity, justice, order, prudence and rectitude; none of which is likely to accomplish much without a stout heart.

The world owes no man anything who does not serve it.

What is the greatest pleasure of an old man? Conversation. Indulge him—if you have a kind heart.

SAFETY TALKS

Like the Chicken, We—
IT BEGINS to look as though maybe we humans are second cousins to the chickens when it comes to crossing the road.

Of 7,250 pedestrians killed during 1937 in traffic accidents that occurred in cities, says the National Safety Council, in its 1938 edition of "Accident Facts," 85 per cent were struck while crossing the road.

About 2,900 persons were injured fatally while crossing a street somewhere BETWEEN intersections. Approximately 3,260 met their death at intersections. Either they were crossing the intersection with the traffic signal, against the signal, diagonally, or were crossing an intersection at which there was no traffic signal. Deadly and tragic work at the crossroads!

old C. Q. D. signal was used. The crew of the R. J. Matthews, which had run aground, was rescued.

9. The 16-inch guns which will be used on the new battleships, the Washington and the North Carolina, are the largest and most powerful guns on any war vessel in the world. These guns will hurl 2,100-pound projectiles 35,000 yards.

10. New York university, New York city, 37,677; University of California (Berkeley), 25,530; College of the City of New York, New York city, 23,306; Ohio State university, Columbus, Ohio, 17,411, and Columbia university, New York city, 17,544.

Australian Aborigines

Although the white colonization of Australia began in 1788, the majority of its aborigines still do not know how to cultivate land, make clothes or build a shelter other than a windbreak, declares Collier's. These people have always been looked upon as little more than animals. In fact, up to 40 years ago, a settler merely required a permit to "shoot, poison or otherwise kill" them at will. There are estimated to be 60,000 aboriginal Australians among the commonwealth's present population of 7,000,000.

How Women in Their 40's Can Attract Men

Here's good advice for a woman during her change (usually from 38 to 52), who fears she'll lose her appeal to men, who worries about hot flashes, loss of pep, dizzy spells, upset nerves and moody spells. Get more fresh air, 4 hrs. sleep and if you need a good general system tonic take Lydia E. Pinkham's Vegetable Compound, made especially for women. It helps Nature build up physical resistance, thus helps give more vivacity to enjoy life and assist calming jittery nerves and disturbing symptoms that often accompany change of life. **WELL WORTH TRYING!**

Of a Kind
The sincere alone can recognize sincerity.—Carlyle.

LOST YOUR PEP?

Board of Fire Commissioners of Campbell Fire District.
(March 9-16-23-1939)

RESOLUTION OF INTENTION TO SELL REAL ESTATE

IT IS HEREBY RESOLVED, ORDERED AND DECLARED by the Board of Trustees of the Campbell Union High School District of the County of Santa Clara, State of California, as follows:

That the property hereinafter described is not now or never will be needed for public use by the said Campbell Union High School District. That it is the intention of the said Board of Trustees to sell all the following described real property belonging to said Campbell Union High School District, which said property is situated in the County of Santa Clara, State of California, and is particularly described as follows:

Beginning at a brass plug at the intersection of Campbell Avenue and Santa Clara and Los Gatos Road and running thence North 0 degrees 30 minutes W. along the center line of Santa Clara and Los Gatos Road to a brass plug 303.45'. Running thence North 89 degrees 51 minutes East along the center line of Sanford Avenue 394.60' to a 3-4" pipe at the intersection of Sanford and Fourth Streets; thence running North 0 degrees 25 minutes W. along the center line of Fourth Street 802.23' to a granite monument at the intersection of Campbell Avenue and Fourth Street; thence running North 89 degrees 59 minutes W. 395.10' to the point of beginning.

That the minimum price for which this property will be sold is \$7500.00.

That the 10th day of April, 1939 at 8 o'clock P. M. of said day at the school building of the Campbell Union High School District situated near the corner of Campbell Avenue and the Los Gatos and Santa Clara Road, Santa Clara County, California, (that being the regular meeting place of said Board of Trustees) be and the same is hereby fixed as the time and place for a public meeting of said Board of Trustees at which sealed proposals to purchase said parcel of land will be received and considered, and such sealed proposals are hereby invited and will be considered at said time and place, the Board reserving the right to reject any and all such proposals. Said sales will be made for cash, lawful money of the United States, ten per cent (10%) to accompany the bid and balance payable upon delivery of deed.

The proposals shall be enclosed in a sealed envelope addressed to the Board and shall be accompanied by a certified check of some responsible bank, payable to the Trustees of Campbell Union High School District in the amount above required.

It is further resolved and ordered that this Resolution shall be published once a week for three successive weeks in the Campbell Press, a newspaper of general circulation, published in said County of Santa Clara, and that copies of this Resolution duly signed by a majority of this Board be posted in three public places in said district not less than fifteen days before said date of meeting to be held April 10, 1939, as aforesaid.

Passed by the Board of School Trustees of the said Campbell Union High School District at a regular meeting held March 13, 1939 by the following votes:

Ayes: Trustees Mr. Vennum, Mrs. Shelley, Dr. Anderson, Mr. Bishop.

Noes: Trustees none.

Absent: Trustees Mr. Conner.

M. C. Vennum, Pres.
Signed: Mrs. Jessie A. Shelley,
Clerk of the Board, Campbell Union High School District.
(March 23-30, April 6-1939)

Mr. and Mrs. Raymond Warner of King City, where Warner is assistant principal of the high school, and their daughter were guests of the Rev. and Mrs. John Brunswick over last week-end. A group of young people from Stockton, where the Brunswicks were located before coming to Campbell, also enjoyed their hospitality.

LEGAL NOTICES

NOTICE OF TRUSTEE'S SALE No. 1693

On Monday, the 24th day of April, 1939 at 2:00 o'clock P. M. at the front door of the County Court House in the City of San Jose, County of Santa Clara, State of California, SAN JOSE ABSTRACT & TITLE INSURANCE CO., a corporation, Trustee, will sell at public auction to the highest bidder for cash, in lawful money of the United States, the following described real property, situate in the County of Santa Clara, State of California, and bounded and described as follows:

First: Beginning at a stake marked K. K. standing at the point of intersection of the line between lands now or formerly of Mrs. E. P. Kelly and E. Kay, with the Southeastern line of lands and right of way of the South Pacific Coast Railway Company, and running thence along the line between lands of said Kelly on the West and lands of said E. Kay and lands now or formerly of G. L. Graff on the East, S. 0 degrees 8 minutes E. 16.04 chs. to a stake marked G. K. standing at the common corner for lands of said Graff and Kelly in the North line of a road 30 feet wide called McKinley Avenue; thence along the North line of said Avenue and line between lands of said Kelly on the North and lands now or formerly of E. C. Stowe, I. J. Comer and Mrs. Mary Jane Wade on the South, N. 89 degrees 58 minutes W. 14.25 chs. to a stake marked K. W. standing at the Northwest corner of said Wade's land and in the Southeastern line of lands and right of way of the South Pacific Coast Railway Company, thence along the Southeastern line of said lands, N. 41 degrees 32 minutes E. 21.43 chs. to the place of beginning. Containing 11.428 acres, and being a part of the original J. H. Kelly Tract in the Rancho Los Coches. Courses true. Var. 17 1/2 degrees E. (according to a survey made on May 18, 1905 by Chas. Herrmann of Herrmann Bros., Surveyors & C. E. San Jose, Cal.)

Second: Beginning at a point of intersection of South line of land now or formerly of Kelly with the Southeast line of the South Pacific Coast Railway; running thence along the South line of land of said Kelly, N. 89 degrees 30 minutes E. 3.42 chs. to a stake; thence S. 0 degrees 30 minutes E. 11.91 chs. to a stake on the Northeastern line of land now or formerly of Blackford on Southwest line of Los Coches Rancho; thence along the Southwest line of said Rancho, N. 44 degrees W. 10.53 chs. to the Southeast line of said Railroad; thence along the Southeast line of said Railroad N. 41 degrees 15 minutes E. 5.75 chs. to the place of beginning; and containing 5 acres of land, more or less, and being a portion of the Los Coches Rancho; courses true: Mag. Var. 16 1/2 degrees East.

Third: Beginning at a stake marked "W. 1" standing at the point of intersection of the North line of land now or formerly of G. W. Blackford with the Southeastern line of the South Pacific Coast Railway; and running thence along the Southeastern line of said Railroad, N. 41 degrees 15 minutes E. 8.57 chs. to the Southwest line of the Los Coches Rancho and at the most Westerly corner of Lot 6 of the Subdivision of the property of the Madden Brothers; running thence along the Southwest line of said Ranch and said lot and along the line of the land now or formerly of Mary J. Wade S. 44 degrees E. 8.75 chs. to a stake marked "W" at corner of land of said Blackford and thence along the North line of said last mentioned land, S. 89 degrees 58 minutes W. 11.58 chs. to the place of beginning containing 3.63 acres and being a part of Section 24, T. 7 S. R. 1 W., M. D. M.

Fourth: Beginning at a point on the Southerly line of Fruitdale Avenue, said point being the most Northeastern corner of that certain 5.019 acre tract as described in Deed executed by Jennie Dean Myers to Salvatore Di Salvo, dated May 3rd, 1919 and recorded in the office of the County Recorder of the County of Santa Clara, State of California on the 5th day of May, 1919 in Book 488 of Deeds, at Page 261 of said Records; thence Southerly and along the Easterly line of said 5.019 acre tract conveyed by said Jennie Dean Myers to said Salvatore Di Salvo 155 1/2 feet, more or less to the lands and right of way of the South Pacific Coast Railway Company; thence in a Northeasterly direction and along the Northwesterly line of the lands of said South Pacific Coast Railway Company 180 feet, more or less, to the Southerly line of Fruitdale Avenue; and thence Westerly and along the Southerly line of Fruitdale Avenue 155 feet, more or less, to the point of beginning. Containing one-half acre, more or less.

Fifth: Beginning at a stake marked K. 1 and 3-4 inch iron pipe standing at the point of intersection of the South line of Fruitdale Avenue with the Northwesterly line of the land and right of way of the Southern Pacific Company; thence along the South line of Fruitdale Avenue, N. 89 degrees 55 minutes W. 9.39 chs. to a stake marked K. 2 and 3-4 inch iron pipe; thence leaving said Avenue and running along the center line between two rows of Fruit Trees, S. 0 degrees 10 minutes W. 10.69 chs. to a stake marked K. 3 and 3-4 inch iron pipe standing in the Northwesterly line of the land and right of way of Southern Pacific Company; and thence along the Northwesterly line of said Company's land and right of way, N. 41 degrees 32 minutes E. 14.24 chs. to the place of beginning. Containing 5.019 acres and being a part of the Kelly Tract in the Los Coches Rancho. Courses True. Var. 18 degrees East, ac-

LEGAL NOTICES

ording to a survey made on the 18th day of June, 1914, by Chas. Herrmann of Herrmann Bros., Surveyors and C. E., San Jose, California.

Excepting therefrom that portion thereof which lies between the Easterly line of the land conveyed by Edward H. Lenox to James H. Kelly, by Deed dated September 10, 1873 and recorded in Book 30 of Deeds, page 317 in the office of the Recorder of the County of Santa Clara, State of California, and the Northwesterly line of the lands and right of way of South Pacific Coast Railway Company, (now Southern Pacific Company.)

Said sale will be made to satisfy the obligations secured by and pursuant to the power of sale conferred in a certain Deed of Trust executed by Antonio Catania and Mary Catania, his wife, as Trustees to Bank of Italy, a corporation, as Trustee, for the benefit and security of SALVATORE DI SALVO dated July 30, 1921 and recorded August 5, 1921 in Volume 143 of Trust Deeds, page 409, Santa Clara County Records, San Jose Abstract & Title Insurance Co., a corporation, is now Trustee under the above mentioned Deed of Trust.

Notice of breach of said obligations and election to sell said real property was recorded in the office of the County Recorder of said County on December 6, 1938, in Volume 909 of Official Records, page 168. This notice is given in compliance with the written application heretofore made on the trustee by said beneficiary.

Dated: March 7, 1939.
SAN JOSE ABSTRACT & TITLE INSURANCE CO.
As Trustee.
(Corporate By L. P. EDWARDS Seal) Its President.
March 30; April 6, 13, 20-'39)

Mr. and Mrs. M. E. Purmort are visiting in Burbank, Calif., with Mrs. Frank Hart, a sister of Mr. Purmort. They are accompanied by A. A. Purmort and little Barbara Medlock as well as two of the high school students who are attending the music conference in Long Beach.

Many Campbellites are taking advantage of every opportunity to visit the Golden Gate Exposition. Among those of whom we have heard recently are F. C. Smith, the Carl B. Field family and the Edward Merriells of Page Avenue. Many of the local young people and students are going in classes or groups. Saturday Bud Bachman was one of the San Jose State college students who participated in their day. The Press office force and C. T. Fawcett took a day off Friday and saw a small part of the many attractions.

Emil Buchser, principal of Santa Clara Union high school was appointed to the county board of education by the county supervisors, to fill the unexpired term of Sarah Wayland who died last week.

Alfred Beer returned last week from a visit of over a year in Europe. He spent most of his time in Germany and Sweden, going there with Noel Voge. Voge is now employed in the American Consul in Germany. Beer was a member of the Campbell Sea Scouts at one time. Monday evening he was given a welcoming party by a group of friends at the home of his parents in Willow Glen. Beer is being treated for an improperly set leg, which was broken while he was in Yugoslavia.

When there's a Boy in the family By Percy Crosby

THE POSTMAN FAILS TO BRING THE BOX OF TABLE TRICKS WILLIE SENT FOR THE DAY BEFORE

Miss Dorothy Merriman and Mrs. Ellen Mills who have been visiting the former's aunt in Tucson, Ariz., this week, will arrive home Saturday. Miss Gladys Merriman is staying at the manse during her sister's absence.

THE AWFUL PRICE YOU PAY FOR BEING NERVOUS

Quivering nerves can make you old and haggard looking, cranky and hard to live with—can keep you awake nights and rob you of good health, good times and jobs.

What you may need is a particularly good woman's tonic—and could you ask for anything whose benefits are better proved than famous Lydia E. Pinkham's Vegetable Compound? Let its wholesome herbs and roots help Nature build up more physical resistance and thus help calm your shrieking nerves, give more energy and make life worth living again.

More than a million women have reported benefit—why not let Pinkham's Compound help YOU, too, to go "smiling thru" trying times like it has other grateful women for the past 3 generations? IT MUST BE GOOD!

The Cyril Collett family were here from Salinas last Tuesday and Cy joined his former brother Kiwanians at Tuesday's luncheon.

HELP STOMACH DIGEST FOOD
Without Laxatives—and You'll Eat Everything from Soup to Nuts

The stomach should digest two pounds of food daily. When you eat heavy, greasy, coarse or rich foods or when you are nervous, hurried or rush poorly—your stomach often pours out too much fluid. Your food doesn't digest and you have gas, heartburn, nausea, pain or sour stomach. You feel sour, sick and upset all over. Doctors say never take a laxative for stomach pain. It is dangerous and foolish. It takes those little black tablets called Bell's for Indigestion to make the excess stomach fluids harmless, relieve distress in no time and put you back on your feet. Relief is so quick it is amazing and one 2c package proves it. Ask for Bell's for Indigestion.

How Women in Their 40's Can Attract Men

Here's good advice for a woman during her change (usually from 38 to 52), who fears she'll lose her appeal to men, who worries about hot flashes, loss of pep, dizzy spells, upset nerves and moody spells.

Just get more fresh air, 8 hrs. sleep and if you need a reliable "WOMAN'S" tonic take Lydia E. Pinkham's Vegetable Compound, made especially for women. It helps Nature build up physical resistance, thus helps give more vivacity to enjoy life and assist calming jittery nerves and those disturbing symptoms that often accompany change of life. Pinkham's is WELL WORTH TRYING.
